CAREER OBJECTIVE

Recent Information Science graduate seeking an entry-level opportunity to begin a career in software development, data, or technology. Interested in applying programming, database, analytical, and problem-solving skills to real-world projects while learning industry practices and new technologies.

EDUCATION

SDM Institute of Technology, Mangalore
Bachelor's Degree in Information Science

2022 – 2026
CGPA: 8.17/10

TECHNICAL SKILLS

Programming: Python, SQL

Web / Backend: FastAPI, REST APIs, JSON, CRUD Operations

Databases: MySQL, MongoDB

Data Analysis: Pandas, NumPy, Data Cleaning, Exploratory Data Analysis, Data Visualization

AI / Generative AI: Google Gemini API, RAG (Basic), LLM-based Applications

Tools: Git, GitHub, Tableau, Streamlit, yfinance, BeautifulSoup

EXPERIENCE

Technical Intern – Full Stack Development, Castlerockin

Jan 2026 – May 2026

- Worked on backend development using Python and FastAPI, developing REST API endpoints and supporting application workflows.
- Worked with Pandas for data cleaning, handling missing values, formatting datasets, and preparing data for application processing.
- Implemented JSON-based data insertion and retrieval and worked with MongoDB/database integration for storing and accessing application data.
- Debugged and troubleshooted Python code and API-related issues while understanding the workflow from API request through processing and database operations to the final response.

ACADEMIC & PERSONAL PROJECTS

Nami – AI-Powered Hospital Assistant Robot System

Python, FastAPI, Gemini, LiveKit, MongoDB

- Developed an AI-powered hospital assistant system designed to assist users with common hospital operations through conversational interaction.
- Integrated Google Gemini Realtime capabilities with LiveKit to support real-time voice-based communication between the user and the AI assistant.
- Implemented specialized tools and workflows covering doctor management, patient records, appointment handling, medicine-related operations, and hospital navigation.
- Designed backend APIs using FastAPI and implemented database operations for storing and managing structured hospital information.
- Worked with intent-based processing to identify user requests and route them to appropriate hospital functions.

Clinical Trial Analytics & RAG-Driven Insight Pipeline

Python, Pandas, NumPy, Tableau, RAG

- Developed a complete Python-based data pipeline for processing and analyzing clinical trial information.
- Performed data cleaning, preprocessing, transformation, exploratory analysis, and feature engineering using Pandas and NumPy.
- Created derived metrics such as enrollment velocity and enrollment efficiency to analyze clinical trial enrollment performance.
- Prepared analysis-ready datasets and developed Tableau visualizations to communicate trends and insights from the data.
- Implemented a Retrieval-Augmented Generation (RAG) workflow to enable conversational querying of information contained in clinical trial documents.

ACADEMIC PROFILE

- Bachelor's degree in Information Science with a CGPA of 8.17/10, with a strong foundation in programming, databases, software engineering, and computer science fundamentals.
- Participated in **Smart India Hackathon (SIH) 2024** and other college-level hackathons and technical events, gaining experience in collaborative problem-solving, teamwork, and developing solutions for real-world problem statements.
- Actively participated in college events, technical activities, competitions, and social initiatives, while coordinating and working with student teams in organizing and supporting various college activities.

ADDITIONAL PROJECTS

Historical Stock Market Analysis *Python, Pandas, NumPy, yfinance*

- Developed a Python-based application to collect and analyze historical stock market data using the yfinance library.
- Performed data cleaning, transformation, exploratory analysis, and visualization of historical market information.
- Analyzed historical price, volume, and trend patterns to generate meaningful insights from financial data.

Intelligent Customer Support Ticket Classifier *Python, Streamlit, Machine Learning*

- Developed a Streamlit-based application for automatically categorizing customer support tickets.
- Implemented data preprocessing and machine-learning based classification to organize incoming support requests into relevant categories.

ADDITIONAL INFORMATION

- Comfortable working in team-based environments and contributing to academic, technical, and extracurricular activities.
- Interested in continuously learning new technologies and applying technical knowledge to practical problems.
